Overview

One Way Vision:

One Way Vision: One Way Vision is a type of film that allows light to pass through in one direction only. It is commonly used in security applications, such as for vehicle windows and display cases. The film is made of a material that has a grid of small holes or a similar pattern. This pattern allows light to pass through in one direction, but it blocks light from passing through in the opposite direction. This makes it difficult for people outside the vehicle or display case to see inside, while people inside can see out.
