Tips:

Beam Angle is the degree of width that light emits from a light source. In specific terms this is the angle between the opposing points on the beam axis where the intensity drops to 50% of its maximum. We normally produce 60 degree and 120 degree beam angle lights.

60 degree angles are often used for highlighting particular objects, such as within display cases, and also where light distribution needs to be restricted.

120 degree angles are suitable for dining room, kitchen and living room.

Warm white is more
Soft and closer to
Halogen light.
