Details:

Attentions for using of LED Acrylic Vacuum Formed Channel Letters (SS or Aluminum border):

Use LED power only, don't plug into a high voltage source.

Don't leave on continuously 24 hours, or will affect the LED's lifetime.

Please fit with a protection tube at the hole for cables to avoid damage to the cable,

The cable connecting to the terminal needs to be covered by electrical tape in order to avoid oxidizing the exposed wires.

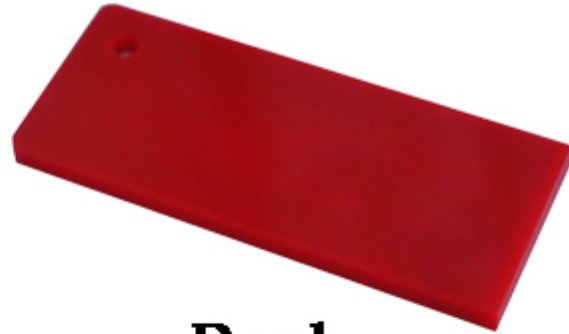

Be careful during installation, don't strike the letters.

Color selection:

You can choose the color of the face, border, and LED light from the following colors

White

Red

Green

Blue

Applications:

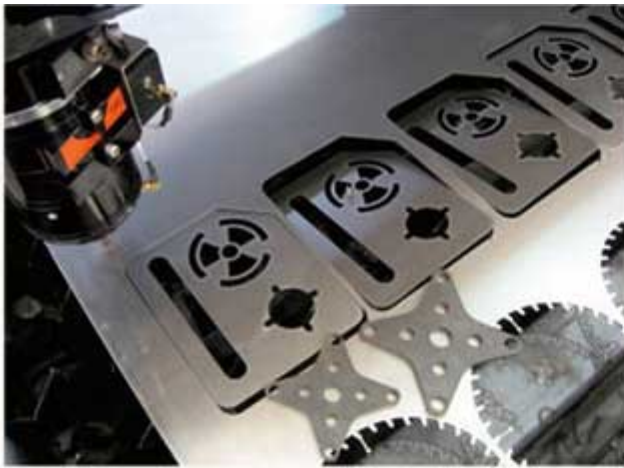

Applied on various walls for company imaging, LOGO board, signage, advertising wall, cultural wall, conference room, slogan, hotel lobby, beauty parlors, special brand shop logo, decoration companies, government offices, garment shops, etc.

Led signage boost business:

The first thing you see when you go into a store, it is signs. It has not surprising that companies increasingly seek to differentiate themselves with unique and attractive signs. So much so that the electrical industry commercial signage is now estimated at over 2 billion dollars in the United States. Channel letter signs are prominent.

Channel letter signs in particular, have gained popularity in recent years. Neon or LED lamps are used to illuminate channel letters are made to stand out from the building. Chain letters are usually made of aluminum which makes them very light and versatile, while still being able to withstand high winds and numerous conditions. For a soft glow of Nice, the lamps are installed in the rear channels and letters are the new trend.
