Features:

Favorable Price: Comparing the resin letters and 2D channel letters, it is more preferential and favorable.
There is no front edge that normally seen on other channel letters. Beautiful and elegant.
It won't yellow for outdoor use and normally in use of 5-8 years no obvious fading.
Weather-resistance, UV ray-resistance and the case will not easily to be aging and fragile or fading, Easy Maintenance
Light Material & Simple Installation: The non-edge letters adopts the raw materials of acrylic board, aluminum strip, aluminum composite panel, PVC board. Comparing with the heavy metal materials of resin letters, the non-edge letters is light in weight.
Using LED source which are low current, low voltage and safe to humans, and save up-to 80% of energy comparing with the incandescent light.
Stable, safe and durable, the LED lifetime is up to 80,000 hours.
Environment friendly, there are no ultraviolet and infrared spectrum, no radiation, no pollution, no mercury element and few glare. LED is cold light source which is a typical green illuminating source.

Details:

The non-edge letter consists of enclosure, surface board, and LED lights. The enclosure adopts aluminum strip with the process of slotting, hook angle and laser welding; The surface board engraver engraved thin grooves and contour then inside the LED lights installed with organic glue pasted.

The main procedures to produce the LED Acrylic Channel Letters (Painted Aluminum border without edge) are: first, the letter cases are made by cutting Painted Aluminum sheet or Aluminum sheet welding and polishing etc. technical processes, then installation of LED light in the letter case, and the final is to fit with the acrylic panel. Painted twice at the last. To meet your requirements, you could choose type and thickness of the Aluminum border as well as the color of the LED light and the color of the Aluminum. No matter in the night or day, the indication effect remains the same, and relevantly, different from the resin letters, it will not fade but with easy for maintenance and low cost.

Attentions for using of LED Acrylic Channel Letters (Painted Aluminum border without Edge):

Use LED power only, don't plug into a high voltage source.

Don't leave on continuously 24 hours, or will affect the LED's lifetime.

Please fit with a protection tube at the hole for cables to avoid damage to the cable,

The cable connecting to the terminal needs to be covered by electrical tape in order to avoid oxidizing the exposed wires.

Be careful during installation, don't strike the letters.

Color selection:

You can choose the color of the face, border, and LED light from the following colors

White

Red

Green

Blue

Applications:

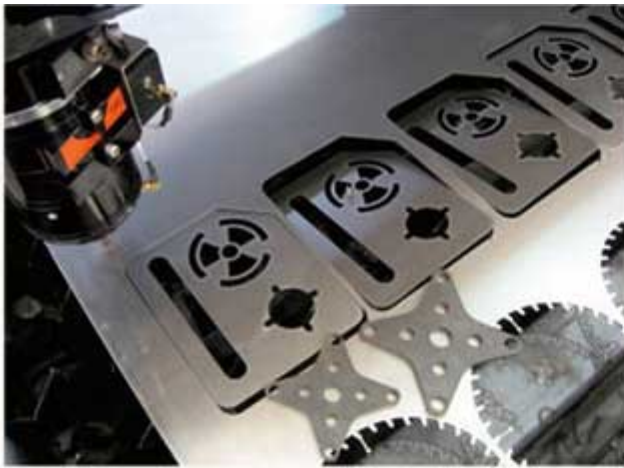

Applied to service industry, shopping mall, station, hospital, market, company door signs or other various door signage or labels.

LED Signage Boost Business:

The first thing you see when you go into a store is signage. It has not surprised that companies increasingly seek to differentiate themselves with unique and attractive signs. So much so that the electrical industry commercial signage is now estimated at over 2 billion dollars in the United States in which the channel letter signs are prominent.

Channel letter signs in particular, have gained popularity in recent years. Neon or LED lamps are used to illuminate channel letters are made to stand out from the building. Channel letters are usually made of aluminum which makes them very light and versatile, while still being able to withstand high winds and numerous conditions. For a soft glow of Nice, the lamps are installed in the rear channels and letters are the new trend.
