Crystal transfer machine is used to make crystal crafts. Printing images first on the crystal film, bonding to the crystal material with glue for the second step and clip the unused film and then put it in the crystal machine to fix the image on the crystal through making full use of the UV lighting. Last but not least, to coat another kind of glue to protect the image and then trimming and cleaning are both necessary.

Notice: Color of the machine is variable, and the color is random according to the ones in stock when you buy the machine. Certainly, you can choose the color we have made but need time to finish if it's not in stock. Also, you can customize the color you like but need extra cost and large order.
