Overview

Description:

Acrylic sheet is also called PMMA sheet or organic glass sheet. The chemical name is polyethylene methacrylate. The products are widely used in engraving, advertisement sheet, instrument, parts of instrument, lamps, decoration, airplane, automobile fittings, medical appliances, work of art, insulation material for electrical appliances, specimen, sign board and various articles for light industry, culture and education, livelihood, etc.

A-grade has better impact strength than glass(10x greater), easily fabricated, excellent thermoformed, polished or machined, excellent light transmission, excellent weather ability. This acrylic is made by the newest PMMA material, Germany equipment and is casting by the British mold, so it is the competitive products of the acrylic market. It is applicable to all the high-level advertising sign production, as well as used for some specific fields.

We have 22 and more kinds of Grand-A boards with different thicknesses from 0.1" (2mm) to 1.0" (25mm). And the size is 48.0"*94.5" (1220*2400mm).

Feature:

- . Better impact strength than glass (10x greater).
- . Easily fabricated, excellent thermoformed, polished or machined.
- . Good clarity.
- . Excellent light transmission.
- . Chemical resistance to common acids, alkalis, salt spray, petroleum oils and greases.
- . Excellent weather-resistance
- . Light weight and strong.
- . Excellent in insulating the electricity.
