Overview

Description:
The auto LED display, should be used for advertising, publish information or even give a customize presentation of the vehicle owner, etc. With 8 characters in Chinese or 16 characters in English, can be displayed in one line simultaneously. The display speed can be adjusted according to the users requirements.

There are several control modes for this product as follows:
. Serial data wire.
. Flash memory disk.
. Remote controller.
. GPRS and GPS. (Change the display contents by sending massive emails from `the` computer you can add the GPRS position function.)
The alarm function can be set under all control modes, like sending a SMSadd activating the GSM mode. Also sending an email activates the function to the GSM network and GPRS mode, and synchronization about the display contents, can be use in buses,information that you can watch through the city. Satellite positioning management and theft-proof function to the GPRS and GPS mode.
Light weight, high technology and durable quality.

Specifications

Essential parameter
