Descriptions:

New model of this banner slitter & rewinder, reeling-in & expanding machine is being debuted ceremoniously in 2007. This machine is improved in 2010, and now there are two cutting heads, one is with round blade and the other is blade with teeth. The blade with teeth could cut harder material and more efficient. It is added in the functions of rewind and horizontal cutting, by two options device, meter and cross-cutter. Special double support rollers, distinguish our slitter with other ones. Frequency converters are adopted for both roller and cutting blade turning speed control and set. With the function of digital display for reeling-in & expanding length, and semi-automatic cutting width control, customer may reel-in or expand film roll according to the required length.

Typical Applicants:

Flex vinyl, blackout, mesh, one way vision, self-adhesive vinyl, reflective sheeting, application tape, foam adhesive tape, double-sides adhesive tape, and etc.
