Mini Order: 1 pc

Average Rating: 1b (kg)

[Inquire Now](#)

Overview

Description:

The Bulk Ink System Cartridge is for Roland Soljet, Versacam and VersaArt series Printers.

One Bulk Ink System Cartridge for Roland consists of one cartridge and one permanent chip.

This Bulk Ink System Cartridge must be combined used with the ECO-HH-Ro 500ml bottle ink for Roland printers.

Application:

If you were a user of original cartridges before, but now you want to reduce the expenses, we strongly recommend you to use the Bulk Ink System Cartridge which contains a permanent chip. It is very convenient to continually conducting printing simply by filling the cartridges with ECO-HH-Ro ink when the printer is going to run out of ink. Compared with the original cartridges, the CISS Cartridges are beneficial to reduce the cost because they are refillable ink cartridges. It is easy to install as the cartridge is fitted with each ink color.

Pack type inside cartridge prevents inks from overflowing and allows air compression to circulate, making it possible to deliver stably inks to the printer head using air pressure.
