## Overview

Application:
It can be used to print sign logos, digital imaging, leather, shoes, t-shirts, textile products, linen, gifts, beauty products, household goods, interior decoration, special printing, and handicraft production and other industries.

Machine details:

Features:

High-speed and High Resolution Printing:

Servo motor, screwball transmission, coincident with high precision,the print can be repeated 50 times, minor errors of 0.002mm, touch screen color control, elegant appearance and it is easy to operate.

It takes only 83 seconds to finish an A3+ 13.0"x19.0" (329mmx483mm) print, and the highest resolution can be up to 2880dpi, it can do a high resolution printing job and a mass production work.

Durability and easy maintenance: Design for mass productions and high quality frequency work, ensuring a long lifespan of the spare parts and the printhead.Auto-lifting and anti-crash devices, ensuring an easy and simple procedure.

High precision servo motor driver, with a long lifespan screw transmission and a 100% running accuracy on the worktable.

Prints on a flat and slightly curve surface, accepting a height up to 5.9" (150mm) and a weight up to 66.1lb (30kg)on the printable objects; the maximum size is A1+ with a curve surface. The different heights of the surface object must be under 0.4" (10mm).

It prints with four color inks, with dye pigment and solvent ink, is suitable for printing a perfect image.

A new method to print is to skip the block and film process, and insteadgetting instant samples or prints, a faster mass production processat a lower cost.The perfect and fast method prodcutions system that has no comparation with the traditional craft methods.
