Overview

- It is stable with moderate winds, it can hold up to 31mph.
- It rotates with the wind to prevent flying away.
- The base folds for an easier transportation and storage.
- Made of high quality aluminum alloy.

The flag banner has a system that is ideal for outdoor or indoor advertising. The event flag system can measure 5 meters tall putting the custom flag over 4 3/4ft above the ground. The event flag system as other banners stands, can be filled with sand or water to gain stability and can support winds up to 31mph.

With this type of system the advertising is visible at any time due to the flag arm, even with hard winds. The flag arm is attached to the top of the telescope flagpole and it extends horizontally along the top of the advertising flag. The event flag system comes with an aluminum telescope flagpole, that is light weighted and folds down for an easier transportation and storage. The telescope flagpole also works as a setup breeze. The advertising event flag can be attached to the ground level and each section of the flagpole can be raised up and locked into position. The event flag system has four legs that supports and attaches to the base and distributes the wind loads. The base also folds for an easier transportation and storage.

The flag has a hang weight on the bottom grommet, to keep the advertising event flag extended and does not allow the flag to wrap around the pole. The flag and flag arm and have a free rotation system with the wind, it has the ability to rotate 360° degrees, it provides stability and a mobility which allows the event flag system to support greater winds and it moves to the position of the least wind resistance.

Application:

Ideal for outdoor or indoor advertising
