Overview

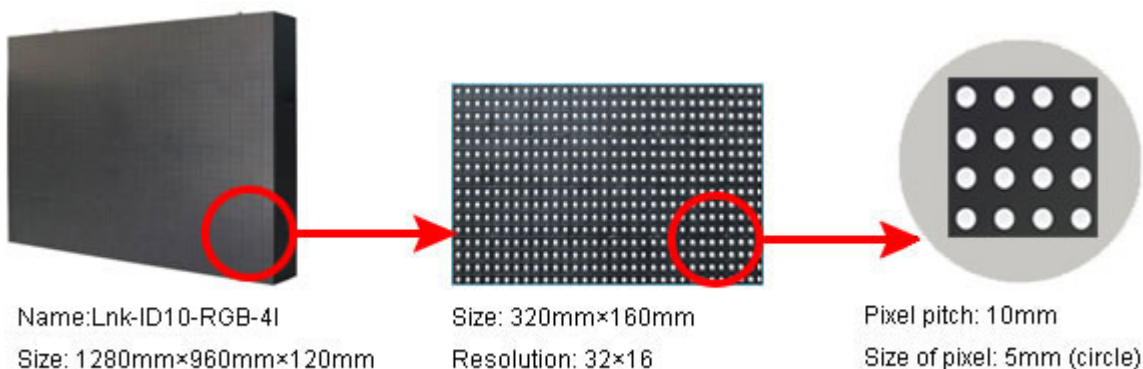

Description:

3 in 1 Integrated full color screen is our patented product. It has absolute color blending ability, high brightness and a wide viewing angle.

Advantages:

- High resolution: the resolution is up to 40000dots/sq.m. It produces a good effect for exhibition and vivid picture
- Good color blending: With RGB in one pixel plus reasonable cavity reflection and permutation, the color is mixed as the conventional LED lamp, and will get the blending effect at a certain distance.
- Anti-static property: Innovative mechanical design for cavity reflection and configuration of the RGB chips.
- High reliability: The LED DOT-MATRIX has a nice even surface..
- Wide viewing angle: 140° (horizontal).
- Color consistency: LED chip's high pure color and 100% pharos age of peroxide resin make the perfect display effect
- _High brightness: The 4 x 4 module (utility model patent)can achieve a 1/4 scanning rate, and is able to further enhance its brightness.

Specifications

Specification:

Pixel pitch	0.4" (10mm)	Pixel size
Block module size	1.6" x 1.6" (40 x 40mm)	Pixel in block module
Module size	12.6"*6.3" (320*160mm)	Module resolution
Cabinet size	37.8" x 37.8" x 4.7" (960 x 960 x 120mm)	Cabinet resolution
Cabinet area	0.1106sq.m	Pixel density
Pixel configuration	1R1PG1B	Best viewing distance
Brightness	?1400cd/sq.m	Maximum power consumption
Horizontal viewing angle	140°	IP grade
Driving device	constant current	Driving method
Colors	16777216	Color temperature
Gray scale	14 bits	Refresh frequency
Control method	Synchronization	Working temperature
Frame frequency	?60Hz	MTBF
Working voltage	AC220V/110V±10%	Life span
