800g/pc
Remarks: OEM

Details

With antistatic bag packing, it effectively protects the board slot from potential electrostatic damage. Especially for the slots which are very sensitive to electrostatics.

The heat sink is made of aluminum with good performance of heat dissipation.

Some of the long cable slots we applied were imported from other countries.

Perfect packaging makes safe protection.

Comparison

Through strict selection of electronic components, the new printhead board has been passed the aging test with maximum loading time of electricity to 120 hours.

Most of the electronic components of other brand printhead boards are not in good quality and also not been tested for aging performance as well as short time of loading of

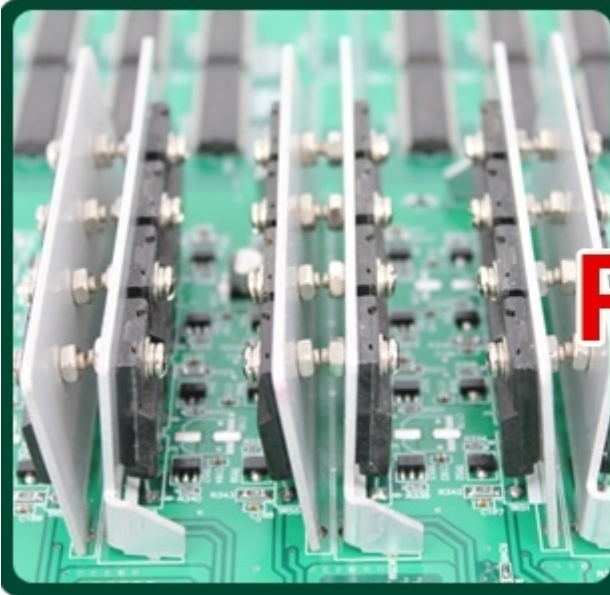

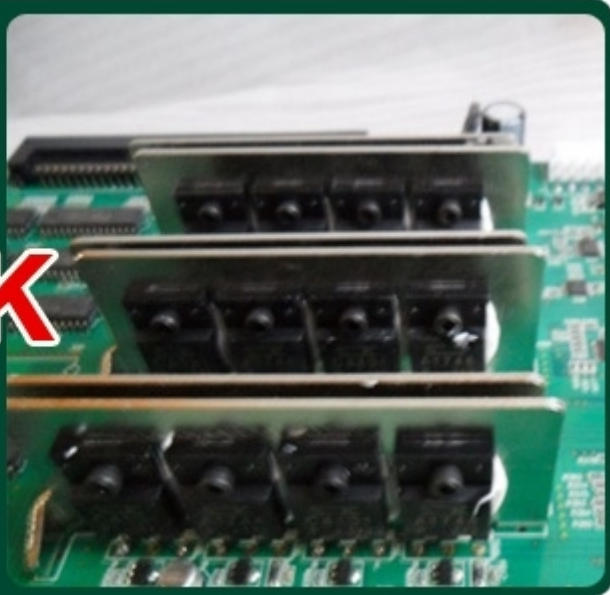

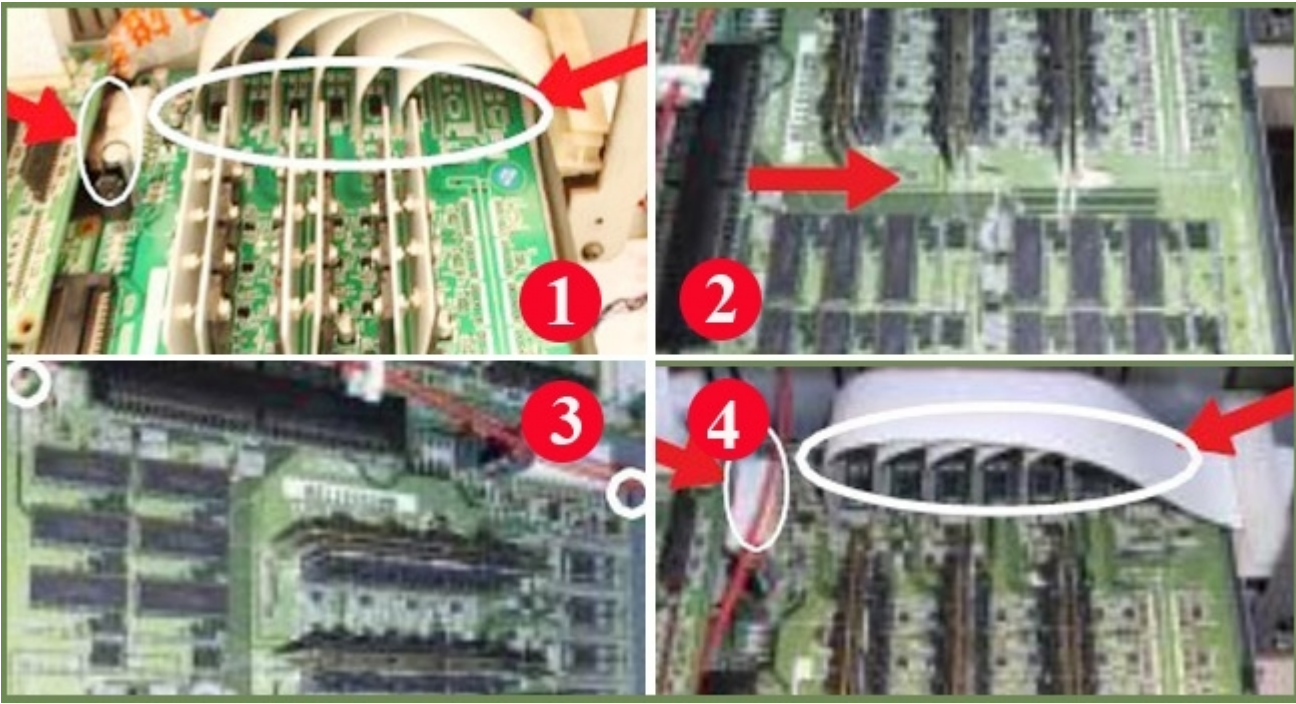

This new printhead board applies aluminum heat sinks which gives good performance of heat dissipation.

Other brand printhead boards use iron h which don't dissipate heat well.

Usage

1. Disconnect the cables from the head board.
2. Move the screws and disconnect the connector.
3. Place the head board to the new one.
4. Connect all the cables to the head board.
5. Carry out the following checks**:**
  • THERMISTER CHECK
  • HEAD UP/DOWN SENSOR CHECK
  • FAN ON THE HEAD BOARD
